

Welcome to the Biome!

Thank you for choosing this package. I've put a lot of work into ensuring these assets are not only beautiful but also highly optimized for professional game development. As a solo developer, I truly appreciate your support!

If you enjoy what you see and want to have more variants, consider the option to buy the Pro version with over 80+ Assets Available:

Join the Community (Instagram Only)

There is no Discord server at the moment. I believe in visual support and showcasing your incredible talent where everyone can see it.

- **Showcase your world:** Take a screenshot or a short clip of the scene you've created using these assets.
 - **Tag me @finottigames:** I regularly feature community work in my Stories and save them in the Highlights.
 - **Networking:** It's the best way to get eyes on your project and see how other developers are utilizing the pack.
 - **Feedback:** Your feedback is gold. Feel free to share your thoughts; it is essential for future improvements.
-

⚡ Tech Specs & Performance

This pack was built with extreme optimization to ensure your game runs smoothly across all platforms.

- **Biome Atlases:** I've drastically reduced Draw Calls by packing the entire biome into just two main Atlases. You can see a preview Texture that will be available in the premium pack.
 - **LOD System:**
 - **General Assets:** 3 levels of LOD for every prop.
 - **Trees:** 4 levels of LOD (LOD 0 to LOD 3), including a final Billboard stage for maximum performance in dense forests.
-

Optimization Guide: Shadows & FPS

Shadows are often the biggest performance killer. To maintain a high FPS, I recommend these settings in your Pipeline Asset (URP/HDRP):

- **Shadow Distance:** Keep it reasonable. 150–200m is usually plenty. You can take the options to bake everything and to use the mix light for the moving objects.
 - **Shadow Cascades:** Set these to 2 or 4. Two cascades are often the "sweet spot" for stylized games.
 - **Soft Shadows:** If your art style allows, use Hard Shadows or low-sampling soft shadows to save precious milliseconds on the GPU.
-

Pipeline Switching: URP ↔ HDRP

Before going further remember to install the High Definition Render Pipeline to use HDRP in Window>Package Management>Package Manager>Unity Registry look for “High Definition Render Pipeline”

The pack is fully compatible with both pipelines. You don't need to recreate anything; just swap the "clothes" of your models.

1. Assign the Pipeline: Go to **Project Settings > Graphics** and select your desired Pipeline Asset.

2. Do the same in **Project Settings > Quality**

3. Swap Materials: Inside the asset folder, you will find two subfolders: **Materials_URP** and **Materials_HDRP**.
4. Apply: Select your models or Prefabs and drag the corresponding materials into the Mesh Renderer slots.

or i prefer use this way, like the image below, just select the original Asset, in **“Models” Folder** and use the material field and search the correct one and apply, now do it for each model.

- ***Note: Custom shaders for Water and Wind are designed to adapt automatically when using the provided Prefabs.***

Custom Shaders

- No shaders are available in this package

Future Updates & Support

I believe deeply in this project. This package is an introduction to my Pro Biome Nature Pack and if you enjoy it, i hope you will consider to buy it, cause it will drastically improve your variants on your game.

- **Technical Support:** If you encounter any issues, feel free to reach me via DM on Instagram (@finottigames). As a solo dev, please be patient; I will get back to you as soon as possible!

Now go ahead—create something incredible!
